

The new Red 5 Professional ensures even faster and gentler hoof care with maximum safety for humans and animals.

Fewer loose parts, improved details and unique ideas promise even more comfortable work as well as higher throughput. With a space requirement of only 12 m², the Red 5 Professional is particularly well suited for fixed installation as a grooming station in the stable.

HIGHLIGHTS

1.1. REAR FOOT STIRRUP WITH DOUBLE V-PARTS

The new rear foot stirrup with integrated step-back lock ensures a particularly tight and gentle hold on the leg. The complete stirrup can be easily adjusted to the animal's size in a few moments and allows an exceptionally **fast fixation of the rear hoof**. Due to the stable, integrated knee rope, the animals can bend their leg particularly gently when lifting. The complete attachment of the rear leg is far more stable. The leg is gently but firmly fixed in the **special plastic V-parts** without any loose parts, in just a few easy steps.

1.2. ELECTRIC CHEST STRAP SYSTEM

The **electric chest strap system** with quick tensioning guarantees a firm and at the same time gentle fixation of the animal. When driving into the crush, the extra wide chest strap is held centrally on the ground, preventing the animal from getting entangled or stumbling. By pressing the control button, the belt is guided upwards through the flexible bracket system into the knee area of the animal, so that the belt system adapts optimally to the cow.

1.2. OPTIMIZED FRONT FOOT HOLDER

The **electric front foot holders with the revised foot strap fixation** ensure even easier and faster fastening. What has remained the same is the minimal power requirement, the exceptionally comfortable working height, and the optimum view of the hoof.

1.4. DOUBLE REAR LEG WINCH

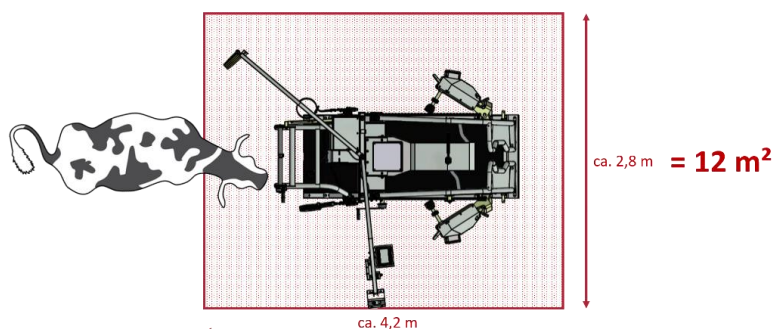

With the **double, electric rear leg winch**, each leg can be secured individually at the rear in just a few steps, eliminating the need to re-attach for lifting. There is a separate winch for both the left and the right leg, with the controls positioned right next to them at an optimum height.

1.5. SILENT CATCHING DEVICE

The **catching device opens silently** along with the frame over its entire width. This ensures easy and stress-free driving in and out of the animals. It is quickly and effortlessly electrically operated from any position around the stand and can be perfectly adjusted to the size of the animal - this is unique.

SPACE REQUIREMENT RED 5: (Basic, Comfort, Professional)

You need enough space around the device to have good access to all 4 legs.

TECHNICAL DATA

EXTERNAL DIMENSIONS (MM)	2,300 x 1,110 x 2,200 mm (L/B/H)
RECOMMENDED ANIMAL SIZE	Live weight: 450-1,000 kg
UNLADEN WEIGHT	Basic 625 kg, Comfort 665 kg, Professional 725 kg
HITCH	Lift truck front and rear hitch, integrated fork-lift truck front and rear hitch, prepared for three-point Cat II
MAINS CONNECTION	380 V, 50 Hz
SURFACE	Hot-dip galvanised, powder-coated
PASSAGE	75 cm

STANDARD EQUIPMENT

STANDARD EQUIPMENT

- + Electric chest strap system with integrated lateral barrier
- + Semi-automatic rear leg stirrup with integrated backstop and double V-system
- + Double electric rear leg winch, one winch each for the left and right leg, incl. separate control
- Electric rear leg lift with optimised hitching
- Optimised electric foreleg lift, can be swivelled out
- Head catching device with electric drive
- Service arm with LED lighting and flex holder
- Non-slip rubber floor
- Fully galvanised base frame
- Prepared for Cat II three-point hitch
- Prepared for additional securing with leg rope system
